Migrated company from ColdFusion to Java/Open Source

Problem Overview
- Multiplan is the largest health claims processor in the US
- Due to rapid business growth, existing software could not support load
- Hard to maintain a large monolithic ColdFusion application

Solution Approach
- Suggested Java and open source tools/frameworks
- Recommended breaking application into layers (SOA, Portal, UI)
- Demonstrated ability to quickly assemble applications using portlets in a portal server that connects to a services layer (SOA)
- Modular Javascript components leveraging ExtJS library provided a responsive look and feel to web applications

Solution Stack	Tools
• Java	• Eclipse (setup plugins)
• ExtJS Javascript Library	• Maven – Build Management
• Jetspeed2 Portal	• Nexus – Artifact Repository
• Spring IoC Framework	• Jenkins – CI
• Spring Web Framework	• Tomcat
• CXF	• Subversion
• Oracle	• Windows
